 Around 5 years Experience

Technical Skills

Frontend: React.js, JavaScript, HTML5

Frameworks: CSS3, Tailwind,

Bootstrap, Material UI

State Management: Redux, Context API

Backend: Node JS

Database: MongoDB, SQL,

GraphDB

Cloud & DevOps: AWS EC2, Docker

Tools: Github, Gitlab, JIRA

Education

BE CSE – Anna University (2021)

Sindhuja Periyasamy

Senior Software Developer

Professional Summary

Results-driven Senior Software Developer with Around 5 years of experience in frontend development, backend development, scalable web applications, and cloud deployment. Expertise in React.js, Node.js, Redux, JavaScript (ES6+), REST API integration, and dashboard development. Proven experience working with Docker, AWS EC2, AI integrations, real-time streaming, and analytics platforms. Strong focus on performance optimization, reusable components, and user-centric design, along with experience in Agile workflows and JIRA ticket management.

Professional Experience

Senior Software Developer

Coretopia Technologies | Nov 2025 – Present

- Lead end-to-end development of ontology-based applications
- Designed and deployed applications using Docker containerization
- Managed AWS EC2 instances, ensuring scalability and uptime
- Worked on application architecture, deployment pipelines, and performance tuning
- Actively handled JIRA tickets, including task tracking, bug fixing, and sprint updates
- Collaborated with cross-functional teams in an Agile/Scrum environment
- Implemented scalable and reusable React components, improving development efficiency and maintainability
- Optimized application performance by reducing load time and enhancing frontend rendering and API efficiency
- Monitored and improved system reliability through logging, debugging, and proactive issue resolution

Software Developer - Aximsoft India Pvt Ltd | *Dec 2021 – Oct 2025*

- Developed dynamic, reusable UI components using React.js
- Implemented Redux for state management in large-scale applications
- Integrated and optimized RESTful APIs for performance and reliability
- Contributed to company website development and UI enhancements
- Built interactive dashboards and analytics modules for a social media platform
- Collaborated with AI teams to:
 - Implement real-time streaming features
 - Handle markdown rendering and frontend data processing
- Developed and maintained WordPress dynamic pages and customizations
- Managed JIRA tickets, including feature development, bug tracking, and sprint tasks
- Improved application performance, reducing load times and enhancing UX

Junior Developer - Itera Solutions | *Jul 2021 – Nov 2021*

- Developed features for web and mobile applications
- Fixed bugs and resolved technical issues
- Assisted in improving application performance and stability
- Supported team by updating and resolving JIRA tickets

Project Highlights

Social Media Analytics Dashboard

- Built scalable analytics dashboards with real-time data updates
- Implemented data visualization and performance optimization techniques

Ontology-Based Application

- Delivered end-to-end solution with cloud deployment using AWS and Docker
- Focused on scalability, modular architecture, and system performance

AI-Integrated Frontend System

- Developed streaming UI features and markdown-based content rendering
- Integrated real-time AI responses with incremental rendering, improving perceived performance and user engagement

Additional Project Highlights

Real-Time Chat & Streaming Interface

- Built a real-time chat application with streaming responses using WebSockets / APIs
- Implemented incremental UI rendering (streaming UI) for better user experience
- Designed smooth message rendering with markdown support
- Optimized performance to handle high concurrent users

Reusable Component Library (Design System)

- Developed a scalable component library using React.js
- Created reusable components like modals, tables, forms, and charts
- Ensured consistent UI/UX across multiple applications
- Improved development speed by reducing duplicate code by ~30%

Performance Optimization & Code Splitting

- Implemented lazy loading and code splitting using React best practices
- Reduced initial load time significantly and improved Core Web Vitals
- Optimized API calls with debouncing and caching techniques
- Improved application responsiveness for low-bandwidth users

Role-Based Dashboard System

- Built a multi-role dashboard system (Admin, User, Analyst)
- Implemented secure authentication and role-based access control
- Integrated dynamic charts and data filtering features
- Enabled real-time data updates for better decision-making

CI/CD Pipeline & Deployment Automation

- Designed and implemented CI/CD pipelines for automated builds and deployment
- Used Docker containers for consistent development and production environments
- Deployed applications on AWS EC2 with monitoring and logging
- Reduced deployment time and minimized manual errors

WordPress + React Integration

- Integrated React frontend with WordPress backend (Headless CMS)
- Built dynamic pages with API-driven content rendering
- Improved content management flexibility for non-technical users
